

# Innovations from abroad: Opportunities for Estonia

Anne Staehr Johansen, PhD

# Outline

---

- Innovations from abroad
  - ▣ Successful diabetes management
  - ▣ Registry-based quality and learning systems
- Critical elements for success
- Conclusions

The image features a decorative header with two horizontal bars. The left bar is orange and the right bar is green. The text 'Successful diabetes management' is written in white on the green bar.

# Successful diabetes management

# Trends in diabetes mortality (all ages)

**SDR per 100,000**

# Trends in diabetes mortality (all ages)

SDR per 100,000

Why the decline in diabetes mortality?

# Critical factors in achieving success

- New human resources
  - Specialized therapeutic nurse education programmes
- Patient education
  - 90+ patient education schools
- Specialized foot clinics
- Outreach to and training of GPs
- Evidence-based clinical guidelines
- Case-based diabetes registry

# Critical factors in achieving success (2)

- National diabetes registry:  
96% of all diagnosed diabetics w/ evidence-based indicators, HgA1c, but also complications!
- Regular use of data, analysis to learn from best performers and identify system challenges w/ recommendations to MOH for changes

**Eliminating preventable diabetes care complications in Estonia could save:**

**50,000,000+**

## Registry-based quality and learning systems

- Danish Data Capture System for management of NCDs in primary health care
- Swedish rheumatology quality registry

# The Danish General Medicine's Quality Unit (DAK-e)

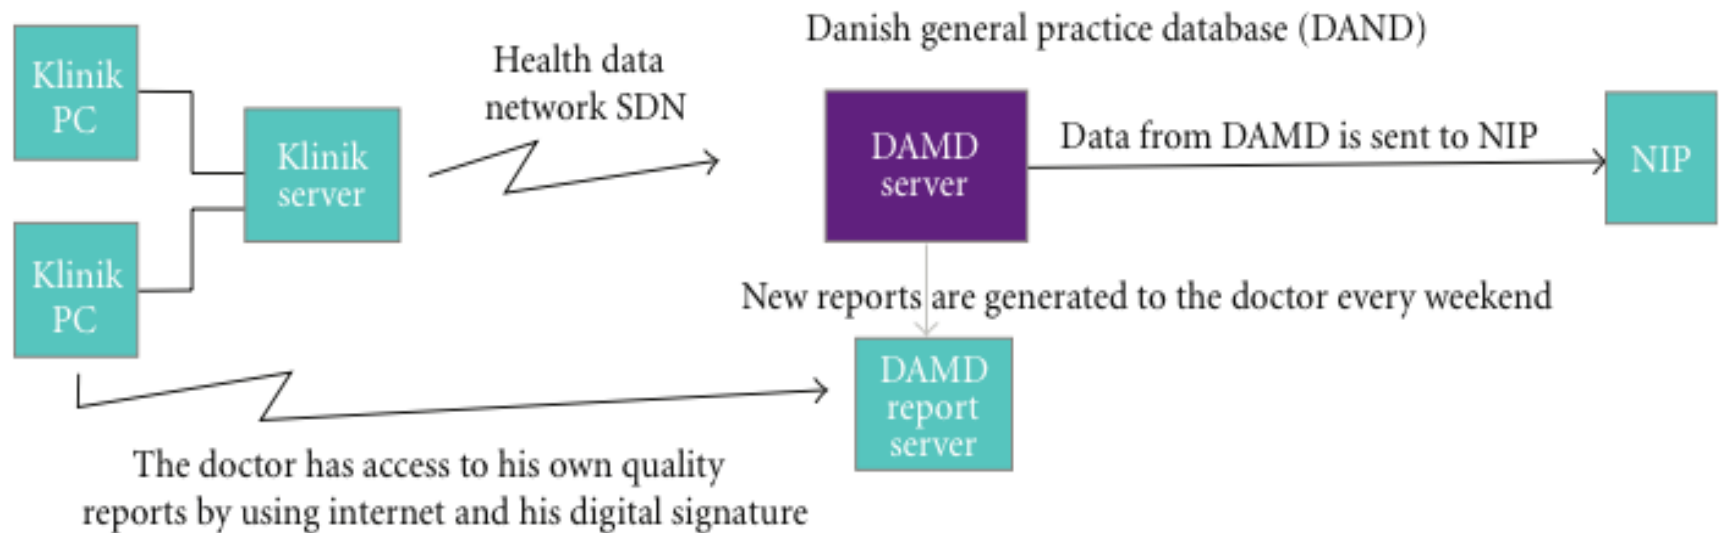

- DAK-e's Mission: **To improve the quality work of general practice**
- Operates the Danish General Practice (GP) Database
- Prepares quality reports for GPs with their own results
- Trains “Quality Ambassadors” who support GPs in their quality work

# Danish General Practitioner Database

- Electronic patient record system and national registries
- Quality development system based on *clinical guidelines and quality indicators*
  - COPD
  - CVD
  - Depression
  - *Diabetes*
  - Heart failure

# Danish General Practitioner Database

## Network Architecture

# The Danish Data Capture Module

## Sentinel Datafangst

Patients with Diabetes M

# GPs Can Benchmark Their Results

## Sentinel Datafangst

Patients with Diabetes M

Benchmark page 1

Benchmark page 2

### Your Diabetes treatment in comparison with other practices

The gray bars show the value for 6 month ago.

All = All patients treated by a GP who uses Data capture  
 = Region South  
 K 461 = Municipality of Odense  
 Din = Your population

The gray bars show the values a year ago.

The gray bars show the value for 6 month ago.

# GPs Can Benchmark Their Performance

## Sentinel Datafangst

Patients with Diabetes M

Benchmark page 1

Benchmark page 2

### Performance indicators

#### Percentage of diabetic patients with HbA1c > 7 % who takes no antidiabetics

All = All patients treated by a GP who uses Data capture  
= Region South  
K 461 = the municipality of Odense  
Din = Your population

The gray bars show the values a year ago.

#### Percentage of diabetic patients with a S-Cholesterol >= 4,5 who takes no lipid-lowering medication

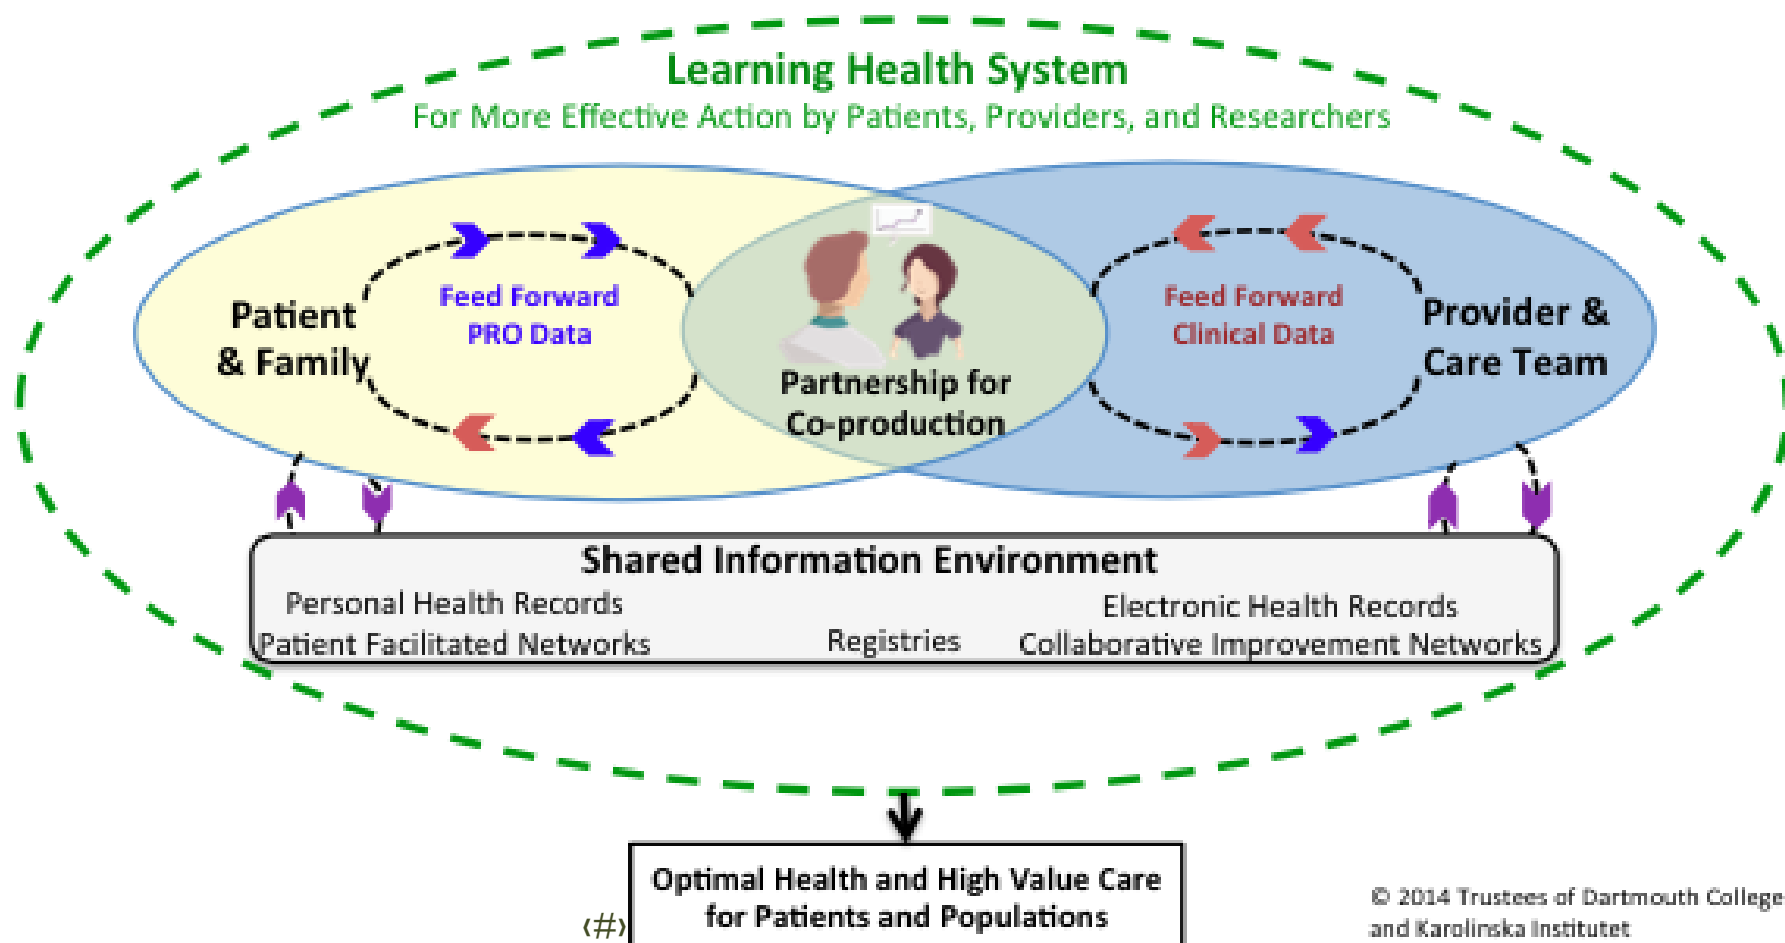

This is the DSAM's current standard we have chosen to use

#### Percentage of diabetic patients with systolic BP >= 130 mm Hg who takes no antihypertensive medication

# The Swedish Rheumatology Quality Registry and Learning System

# Outline

---

- Innovations from abroad
  - ▣ A successful diabetes management program
  - ▣ Registry-based quality and learning systems
- Critical elements for success
- Conclusions

# Critical elements for success

- Clinical databases/quality registries are tools for quality improvement, NOT for control and punishment
- Must be easy to use, privacy must be protected, and add value
- Requires on-going support for implementation and use
- Requires a process for learning from those who do well (“good apples approach”)
- GPs and Funders seen as partners

# Conclusions

---

- Great opportunity to improve clinical outcomes and save costs
- Need for clinical databases and quality learning systems
- Also requires patient education programs, specialized HRH (dietitians, therapeutic patient educators, podiatrists, etc.)

Thank you!
